Employee Name(s): \_\_\_\_\_, \_\_\_\_\_

Address: \_\_\_\_\_, \_\_\_\_\_

Contact Phone/Email: \_\_\_\_\_, \_\_\_\_\_

Training Particulars:

Stormwater management, specifically becoming an MS4 under NPDES Phase 2, tops the list as the biggest challenge facing small communities. We will explore, inform, and equip communities with lessons learned and some of “how-to’s” to address this challenge.

Learning Objectives:

After viewing this program, participants will be better able to:

- Explain the regulatory requirements and the minimum control measures.
- Identify current assets and map/inventory the condition of the existing system.
- Determine cost of service, currently and as an MS4.
- Identify funding options for staffing, equipment, capital projects.
- Decide if it practical to work with other agencies by utilizing partnership opportunities.
- Identify their legal authority, as well as Federal, State laws and local ordinances.
- Determine roles and responsibilities as well as scope of service – ownership and O&M of stormwater management facilities, public vs. property owners.
- Take into account “green” infrastructure.

Lunch will be provided to all participants along with 2 or 3 pdh’s from APWA.

Lunch will be sponsored by:

**ENECON Corporation** – *The Industry Leader in Repair and Maintenance Technologies*
